## Payment Terms Evaluation Table

| $2.0 \%$ 10th \& 25th | $* *$ | $2.0 \%$ | 17.5 | $5.0 \%$ | 2.240 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $2.0 \%$ 15th \& 31st | $* * *$ | $2.0 \%$ | 23.5 | $5.0 \%$ | 2.322 |
| $2.0 \%$ 30 Days |  | $2.0 \%$ | 30 | $5.0 \%$ | 2.411 |
| $4.0 \%$ 10th \& 25th | $* *$ | $4.0 \%$ | 17.5 | $5.0 \%$ | 4.240 |
| $5.0 \% 30$ Days |  |  |  |  |  |

## EXAMPLE in use:

Supplier currently offers Net 30 day terms (worth $\$ 0.411$ per \$ 100 of invoices).
Supplier proposes Net 45, 1\% 15 terms:
Net 45 is worth $\$ 0.616$ per $\$ 100$ of invoices
$1 \% 15$ is worth $\$ 1.205$ per $\$ 100$ of invoices
Assessment: Both elements of the new terms (net, discount) are more attractive than the old terms. The discount option would be the preferred option in this situation.

## NOTES:

* Calculations reflect the value per \$ 100 of invoice, compared to paying immediately (on the invoice date). Calculations are based on the following formula:

Value of Net Days $=[($ no. of days $) / 365$ ] x $\$ 100 \times$ interest rate
Example: Net 30 days value $=[(30 / 365)] \times \$ 100 \times .05=\$ .411$
Value of Discount Terms = Value of Days + Value of Discount
Example: 1\% Net 15 Value = \$ 205 + \$ 1.00 = \$ 1.205
Note: check periodically with your Treasury or Finance department regarding their view of the appropriate interest rate, and whether they have an alternate calculation method they prefer you use.
** Invoices dated in the first 15 days of the month payable $25^{\text {th }}$ of the month Invoices dated after $15^{\text {th }}$ of the month payable $10^{\text {th }}$ of the next month
*** Invoices dated in the first 15 days of the month payable $31^{\text {st }}$ of the month Invoices dated after the $15^{\text {th }}$ of the month payable $15^{\text {th }}$ of the next month
